Share Interactive Results

Use this guide to:

- Save JMP output as interactive HTML.
- Create interactive web reports.

As an example, open the Restaurant Tips sample data table (Get Started > Share Interactive Results > Open Data).

JMP makes it easy to share your output with others. Output from all JMP platforms is interactive.

Save Output as Interactive HTML

You can share an interactive version of the results from a distribution, for example. To do this, go to File > Export > Interactive HTML with Data (Mac) or File > Publish (Windows). JMP creates an interactive HTML version of the distribution platforms that maintains the interactivity of all graphics in the distribution.

Create Web Reports

You can also easily assemble many reports together at once, including distributions, graphs and dashboards into a web report. To combine these reports:

1. Open the reports to include in the web report.
2. Go to File > Publish.
3. Select the reports to be included in your web report and click Next.
4. Enter titles and descriptions for reach report and click Build Report.

Figure 1: Add titles and descriptions for report

5. JMP assembles the reports into a single web package.

Figure 2: JMP Web Report

6. When you click on the icon next to a report, JMP displays the interactive version of the report.
7. The web report can be zipped and shared with colleagues, whether or not they have JMP.
