
JMP Clinical 6.1.1 Hotfix - Release Notes

This document describes changes and enhancements gained from applying the JMP Clinical, Version 6.1.1 Hotfix to JMP Clinical, Version 6.1.

Add Study

JMP® Clinical 6.1 gives the following error when the Add Study button is clicked:

*The namespace addStudyDiag:addStudyOptions is not defined in access or evaluation of 'Expr:setParent', Expr:setParent/******/(addStudyDiag << getName)/******/*

This error affects computers where the Regional Operating System (OS) and Language settings are set to a Language where the decimal separator is represented with a comma (,).

This hotfix was released to resolve this problem:

- 🔗 Apply the Hotfix located at <http://ftp.sas.com/techsup/download/hotfix/HF2/A6M.html#59911>.
- 🔗 After applying the Hotfix, navigate to <C:\Users\<USERID>\AppData\Roaming> and delete the SAS folder.

When JMP Clinical is launched, the clinical dialogs will regenerate resolving the error.
